

ComEd's Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Adm. Code 421.

Sources of Electricity Supplied for the 12 months ending September 30, 2001	Percentage of Total
Biomass power	0%
Coal-fired power	29%
Hydro power	0%
Natural gas-fired power	2%
Nuclear power	67%
Oil-fired power	0%
Solar power	0%
Wind power	0%
Other resources	0%
Unknown resources purchased from other companies	2%
TOTAL	100%

Sources of Electricity Supplied for the 12 months ending September 30, 2001

AVERAGE AMOUNTS OF EMISSIONS and AMOUNT OF NUCLEAR WASTE per 1000 kilowatt-hours (kWhs) PRODUCED from KNOWN[‡] Sources for the 12 months ending September 30, 2001	
Carbon dioxide	660.68 lbs.
Nitrogen oxides	1.34 lbs.
Sulfur dioxide	1.52 lbs.
High level nuclear waste	0.0037 lbs.
Low level nuclear waste	0.0002 cubic feet

[‡]2% of the total electricity supplied was purchased from other suppliers and the amounts of emissions and amount of nuclear waste attributable to producing this electricity is not known and is not included in this table.

Additional information on companies selling electrical power in Illinois may be found at the Illinois Commerce Commission's World Wide Web site; www.icc.state.il.us.

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. As part of this law electric utilities and suppliers are providing an Environmental Disclosure Statement for the twelve months ending every quarter.

The information on this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between 10/01/00 and 9/30/01.

For comparison purposes, the following shows the Midwest states' (Illinois, Wisconsin, Michigan, Ohio and Indiana) electric utilities averages for sources of electricity generation and emissions for 1999.* 67 percent of ComEd's electricity is generated by nuclear power, and another 2 percent is generated by natural gas-fired power. Both nuclear power and natural gas-fired power have lower emissions of carbon dioxide, nitrogen oxides and sulfur dioxide than coal-fired generation. Because of that, our emission rates are 60% less than the regional average for carbon dioxide, 79% less for nitrogen oxides, and 77% less for sulfur dioxide.

(Midwest Sources—rounded to the nearest whole percent)

Coal-fired power	75%
Hydro power	1%
Natural gas-fired power	1%
Nuclear power	22%
Oil-fired power	1%
Renewables	less than 1%
(includes geothermal, biomass, wind, solar, thermal and photovoltaics)	

(Midwest Emissions—pounds per 1000 kilowatt-hours)

Carbon dioxide	1,647.07 lbs.
Nitrogen oxides	6.35 lbs.
Sulfur dioxide	11.87 lbs.

Saving Energy, Money and the Environment

ComEd is committed to showing our customers how to manage their energy use and save money on their energy bills, while helping to make a difference to the environment we all share.

ComEd provides customers with a variety of ways to get information on energy saving ideas. ComEd customers can obtain a free Home Energy Savings Guide, which contains 15 pages of energy and money saving tips, by calling 1-877-SAVPWR-4 (1-877-728-7974). Also, customers can visit ComEd's improved online home energy audit. This Web site gives customers customized energy-saving solutions based on specific information about their homes and energy usage. The home energy audit even provides online links to specially-priced products so you can implement those energy-saving recommendations easily, economically and conveniently. Taking just a few simple and inexpensive energy-saving steps can reduce energy usage by up to 10 to 15 percent. Conserving energy not only reduces energy bills, it also reduces the amount of electricity and pollutants generated.

Also, ComEd and the Chicago Solar Partnership continue to explore and develop solar energy to promote its environmental benefits. This year, ten solar systems were installed in Chicago – including the largest system in Illinois at the Field Museum. ComEd continues to support the development of other renewable energy resources – such as energy derived from the sun, wind and landfill gas – and is providing an experimental program to customers who may want to add solar or wind power systems on their property. If you would like to learn more about solar energy, visit the new Web site, www.ChicagoSolarPartnership.org or call 1-877-451-3915 to request a ComEd renewable energy information kit.
